

Modernize your legacy substation before lunch.

SATEC's Branch Feeder Monitor (BFM-II) helps you bring online power and energy data from your legacy substation. No outages or interruptions needed!

THE SATEC ENHANCEMENT

- + Inexpensive improvement to legacy substations
- + Provide real time data, never before attained, lacking from existing relays
- + Does not interfere with protection circuits or operation
- + Zero outages or downtime... entire substation can be upgraded in less than a day
- + Ideal for outdated substations in industrial plants, utilities, hospitals etc.
- + Breaker Status operation
- + Digital Fault Recording capabilities with the BFM-DFR Model
- + Can monitor up to 18 three-phase circuits or 12 three-phase circuits with DFR model
- + Front Panel Display for local viewing
